

2024 “Super” Ghost Orchid Activity

6/14 - 6/20 4 buds, and very green roots . Two of the buds are getting large. One of the buds started unfurling on 6/20. Each flower lasts 1-2 weeks, after it blooms.

6/21-6/25/24 Two flowers bloomed on June 21! There are still two buds also.

6/26/24 There are now three flowers, and one bud still left to bloom.

6/27—6/28/24 Three flowers, and the forth bud looks like it is almost ready to bloom

6/29—7/3/24 Four flowers, the first flower is starting to yellow though.

7/4—7/9/24 Three flowers

7/10 /24 Two flowers, something is beginning to eat the upper flower though.

7/11/24 Two flowers, but one has turned yellow and is starting to shrivel, and the other one has mostly been eaten, only a small bit remains of that one. It looks like the end of the first 4 buds bloom.

7/12—7/25/24 No buds, no blooms

7/26 3 new buds

7/27—7/30 4 buds, one is much bigger than the rest and may bloom as early as this coming weekend.
